

Scientific Flower Pens

Step 1: Get your supplies:

- 1 pen
- 12" piece of floral tape
- 1 flower, 1 leaf

Step 2: Start applying the tape. Hold your pen and place the end of the floral tape near the writing tip. Pull the tape until it stretches, and wrap it around the pen.

(Hint: The tape will stick to itself when it is stretched!)

Step 3: Add the leaf. Place the long tip of the leaf against the pen, and wrap the tape around the pen and leaf stem. When you get to the broad part of the leaf, let the leaf hang down.

Step 4: Add the flower. Hold the flower stem next to your pen. Continue taping up the pen, stretching the tape and wrapping it around the stem and pen.

Step 5: Pull the tape tightly until it breaks, removing any extra tape. Use your fingers to smooth the tape around the pen.
